Smart Fleet Services

Make your IT work for you...on your terms.

IT asset management is a critical function for IT teams, which includes driving end user productivity and managing total cost of ownership.

However, when this is not optimized or built to scale for the evolving needs of an organization, IT teams may find themselves facing multiple challenges such as - difficulty in tracking lost/critical assets, software compliance issues, sub-optimal IT usage spends, and over-burdened IT resources.

43%
IT professionals still use spreadsheets to track IT assets[1]

60%
IT professionals are missing key information in their IT asset management program[2]

$6M
spent by organizations in detection, response and wasted time due to ineffective endpoint security strategies[3]

Lenovo

IT Asset Management made simple with Lenovo Smart Fleet Services

Lenovo Smart Fleet Services are designed to help you gain control of your endpoints (both hardware and software), increase security and compliance, optimize end user experience, and automate routine manual tasks to free up IT time and resource.

We are device and toolset agnostic, meaning whatever devices your organization uses, we can help optimize your IT management.

DEVICE MANAGEMENT THROUGH A SINGLE PANE OF GLASS

Breakdown IT silos and manage multi-platform and multi-brand of devices through a single MDM toolset. Get a comprehensive view of your IT inventory across the different stages of asset lifecycle. Easily map assets to users and software, recover idle IT spends, and seamlessly patch vulnerabilities to keep your devices up to date.

TRACK YOUR ASSETS ANYTIME, ANYWHERE

Never lose sight of your critical assets. Track whereabouts of your asset in real-time and discover lost assets within seconds. Through customized reports and alerts, gain control and visibility over your IT inventory management.

MAINTAIN STANDARD OPERATING ENVIRONMENTS

Most organizations rely on a standardized backbone of applications and software to keep their business up and running. However, endpoints can go rouge and cause potential business threats. With Lenovo Smart Fleet Services, you can prevent such breaches and ensure that critical applications & agents are always installed and working, even during non-IT support hours.

63% of companies cannot monitor off-network endpoints[4]

IMPROVE SOFTWARE GOVERNANCE & AVOID COMPLIANCE RISKS

Monitor software usage, license consumption, and compliance status of all software used across your organization, in just one place. Deliver BIOS updates, drivers, software patches, and application updates seamlessly.

OPTIMIZE TCO WITH INTELLIGENT & MEANINGFUL DATA

Streamline your IT with access to intelligent and meaningful data, and recover idle IT spends for under utilized devices and software. Customize device configuration, software and services support based on the persona requirements, and make your IT work better for you.

SECURE YOUR ENDPOINTS AND CRITICAL DATA

Protect your endpoints against multiple modes of attack and eliminate exposure of critical business data to internal and external threats. With easy to deploy security solutions, your IT teams will now have time to focus on mission-critical aspects of IT management and business.

41% of all breaches from 2005 to 2015 were caused by lost devices[5]
